## Excel vba create copy worksheets pdf

CopySelectedSheets - copies multiple sheets that you select to a new workbook. CopySheetAndRenameByCell2 - copies the active sheet and renames it based on the hardcoded cell address. The copied sheet will be inserted at the end of the current workbook. Press Alt + F11 to open the Visual Basic Editor. The trickiest part would be to have your users always select the correct cell before running the macro :) Public Sub CopySheetAndRenameByCell() Dim newName As String On Error Resume Next newName = InputBox("Enter the name for the copied worksheet", "Copy worksheet", ActiveCell.Value) If newName = "" Then activeSheet.Copy After:=Worksheets(Sheets.Count) On Error Resume Next activeSheet.Name = newName End If End Sub Alternatively, you can hardcode the address of the cell by which the copy should be named, cell A1 in the below code. How to run a macro from our sample workbook Alternatively, you can download our sample workbook to Duplicate Excel Sheets and run the code from there. The following macros can spare you the trouble of changing the default name manually. I thank you for reading and hope to see you on our blog next week! You may also be interested in To copy to another file, replace "Book1.xlsx" with the full name of your target workbook. For this, you simply take the above code and supply the value of the currently selected cell to the input box automatically. CopySheetToBeginningAnotherWorkbook - copies the active sheet to the beginning of another workbook. Public Sub CopySheetToBeginningAnotherWorkbook() activeSheet.Copy Before:=Workbooks("Book1.xlsx").Sheets(1) End Sub Copy sheet to the end of another workbook This piece of code duplicates the active worksheet and places the copy to the end of Book1. Paste the code in the Code window. You select the needed one and click OK: When you copy a sheet in Excel, the replica is given a name in the default format like Sheet1 (2). CopySheetAndRenameByCell - makes a copy of the active sheet and renames it based on the selected cell value. On this page, you will find a handful of useful macros to automate this task. On the left pane, right-click ThisWorkbook, and then click Insert > Module. CopySheetToEndAnotherWorkbook - copies the active sheet to the end of another Excel file. As with the previous example, the copy will be placed at the end of the active workbook. Just remember to make a couple of replacements in the code: C:\Users\XXX\Documents\Target\_Book.xlsx should be changed to the actual path and name of the workbook from which you want to copy a sheet. Copy sheet to a selected workbook To be able to copy the current sheet to any open workbook, you can create a UserForm (named UserForm1) with a ListBox control (named ListBox1) and two buttons: Next, double-click the form and paste the below code in the Code window: Public SelectedWorkbook As String Private Sub UserForm\_Initialize() SelectedWorkbook = "" ListBox1.Clear For Each wbk In Application.Workbooks ListBox1.AddItem (wbk.Name) Next End Sub Private Sub CommandButton1\_Click() If ListBox1.ListIndex > -1 Then SelectedWorkbook = ListBox1.List(ListBox1.ListIndex) End If Me.Hide End Sub Private Sub CommandButton2\_Click() SelectedWorkbook = "" Me.Hide End Sub With the UserForm in place, you can use one of the following macros to copy the active sheet to the workbook of your choosing. Open your own workbook and navigate to the sheet you want to copy. Public Sub DuplicateSheetMultipleTimes() Dim n As Integer On Error Resume Next n = InputBox("How many copies of the active sheet do you want to make?") If n >= 1 Then For numtimes = 1 To n activeSheet.Copy After:=ActiveWorkbook.Sheets(Worksheets.Count) Next End If End Sub Open the original sheet, run the macro, specify how many copies of the active sheet you want to make, and click OK: To copy a sheet in Excel with one of the above macros, you can either insert the VBA code into your own book or run a macro from our sample workbook. DuplicateSheetMultipleTimes - lets you duplicate a sheet in Excel multiple times. Copy sheet to the beginning of another workbook This macro copies the active sheet before all other worksheets in the destination file, Book1 in this example. Again, please remember to replace "Book1.xlsx" with the name of your destination workbook. Public Sub CopySheetToClosedWorkbook() Dim fileName Dim closedBook As Workbook Dim currentSheet As Worksheet fileName = Application.GetOpenFilename("Excel Files (\*.xlsx), \*.xlsx") If fileName False Then Application.ScreenUpdating = False Set currentSheet = Application.ActiveSheet Set closedBook = Workbooks.Open(fileName) currentSheet.Copy After:=closedBook.Sheets(closedBook.Worksheets.Count) closedBook.Close (True) Application.ScreenUpdating = True End If End Sub This macro enables you to copy a worksheet from another Excel file without opening it. Worksheets.Count) End If Unload UserForm1 End Sub When run in Excel, the macro will show you a list of all currently opened workbooks. To run the macro in your Excel, just do the following: Open the downloaded workbook and enable the content if prompted. Public Sub CopySheetFromClosedWorkbook() Dim sourceBook As Workbook Application.ScreenUpdating = False Set sourceBook = Workbooks.Open("C:\Users\XXX\Documents\Target\_Book.xlsx") sourceBook.Sheets("Sheet1").Copy After:=ThisWorkbook.Sheets(ThisWorkbook.Sheets.Count) sourceBook.Close Application.ScreenUpdating = True End Sub Excel VBA to duplicate sheet multiple times Sometimes, you may need to duplicate the same sheet more than once, for instance to test different formulas on the same data set. CopySheetFromClosedWorkbook - enables you to copy a sheet from another Excel file without opening it. Public Sub CopySheetToEndAnotherWorkbook() activeSheet.Copy After:=Workbooks("Book1.xlsx").Sheets(Worksheets.Count) End Sub Note. Manually copying sheets in Excel is pretty quick and straightforward... CopySheetAndRenamePredefined - duplicates the active sheet, gives a hardcoded name to the copy and places it at the end of the current workbook. Public Sub CopySheetAndRenameByCell2() Dim wks As Worksheet Set wks = activeSheet activeSheet.Copy After:=Worksheets(Sheets.Count) If wks.Range("A1").Value = "" Then On Error Resume Next activeSheet.Name = wks.Range("A1").Value End If wks.Activate End Sub This macro copies the active sheet to the end of a closed workbook. CopySheetAndRename - duplicates the current sheet, renames it as specified by the user, and puts the copy after all other sheets in the current workbook. This can be easily done with the following macro. Sheet1 should be replaced with the name of the sheet you want to copy. To name the copied worksheet based on another cell, replace A1 with an appropriate cell reference. This code duplicates the active worksheet, names the copy as "Test Sheet" (you are free to replace it with any other name you like), and places the copied sheet at the end of the current workbook. Duplicating multiple sheets multiple times is boring and time consuming. For the detailed step-by-step instructions, please see How to insert VBA code in Excel. Public Sub CopySheetToNewWorkbook() activeSheet.Copy End Sub If you'd like to copy several sheets from the active workbook to a new one, select all the worksheets of interest and run this macro: Public Sub CopySelectedSheets() ActiveWindow.SelectedSheets.Copy End Sub Depending on where you want to insert the copied sheet, use one of the following macros. The tutorial provides a collection of macros to duplicate sheets in Excel: copy and rename based on cell value, copy multiple sheets, copy an active worksheet to another file without opening it, and more. CopySheetToClosedWorkbook - allows you to copy sheet to a closed workbook. Press F5 to run the macro. How to add a macro to your workbook To insert the code in your workbook, perform these steps: Open the worksheet you want to copy. That's how you can duplicate a sheet in Excel with VBA. The sample workbook contains the following macros: CopySheetToNewWorkbook - copies the current worksheet to a new workbook. In your worksheet, press Alt + F8, select the macro of interest, and click Run. For the macros to work, the target workbook must be saved on your hard drive or network. The name of another workbook is not specified in the code - the macro will open the standard Windows Explorer window and allow you to choose any destination file: After you select the file and click Open, the macro will copy the active sheet and close the target workbook automatically. This simplest one-line macro does exactly what its name suggests - copies the active sheet to a new workbook. if performed just once or twice. Public Sub CopySheetAndRenamePredefined() activeSheet.Copy After:=Worksheets(Sheets.Count) On Error Resume Next activeSheet.Name = "Test Sheet" End Sub To allow the user to specify the name for the copied sheet, use this code: Public Sub CopySheetAndRename() Dim newName As String On Error Resume Next newName = InputBox("Enter the name for the copied worksheet") If newName = "" Then activeSheet.Copy After:=Worksheets(Sheets.Count) On Error Resume Next activeSheet.Name = newName End If End Sub Upon running, the macro displays the following input box, in which you type the desired name and press OK: In some situations, it may be more convenient to name a copy with a specific cell value, for example, a column header. Copy sheet to the beginning of the selected workbook: Public Sub CopySheetToBeginningAnotherWorkbook() Load UserForm1 UserForm1.Show If (UserForm1.SelectedWorkbook "") Then activeSheet.Copy Before:=Workbooks(UserForm1.SelectedWorkbook).Sheets(1) End If Unload UserForm1 End Sub Copy sheet to the end of the selected workbook: Public Sub CopySheetToEndAnotherWorkbook() Load UserForm1 UserForm1.Show If (UserForm1.SelectedWorkbook "") Then activeSheet.Copy After:=Workbooks( \_ UserForm1.SelectedWorkbook).Sheets( \_ Worksheets(UserForm1.SelectedWorkbook).
